

Data sheet

SONO 1500 CT

Ultrasonic flow sensor

Description/Application

MID examination certificate
no.: DE-09-MI004-PTB011

The SONO 1500 CT is an ultrasonic flow sensor especially designed for heating, cooling or combined heating/cooling application in local and district energy systems.

The SONO 1500 CT has been approved according to MID in class 2 and 3.

Features:

- 1st approval in Europe for ultrasonic flow sensor with dynamic range of q_v/q_p 1:250 in class 2 (q_p 1.5 / 2.5 / 6 / 10 / 15 / 25 / 40 / 60 m³/h)
- Complete dynamic range: $\geq 1:1500$
- Lithium battery with a lifetime of 11 years or external supply
- Temperature range: 5 - 90 °C / 130 °C / 150 °C
- Overload temperature up to 150 °C (sizes q_p 0.6 up to 2.5 m³/h)
- Available in nominal sizes: q_p 0.6 / 1.0 / 1.5 / 2.5 / 3.5 / 6 / 10 / 15 / 25 / 40 / 60 m³/h
- Unique free-beam principle
- Swirl-free flow around reflector
- Robust stainless steel reflector
- All sizes also available in PN 25
- No calming sections necessary in the inlet and/or outlet (standard installation)
- NOWA test capability
- Connection to calculator with pulse defined values
- Insensitive against magnetite
- Installation in any position
- Free selectable pulse values

Ordering:

The standard codes are used for ordering.

Heating application SONO 1500 CT standard codes¹⁾:

Code no.	Flow sensor	Nominal pressure	Cable length of flow sensor
087G1350	qp 0.6 m ³ /h / 110mm thread / DN 15 / G ³ / ₄ B / 1 liter/pulse	PN16	2.5m

¹⁾ Only in rising or falling pipes or tilted installation.

²⁾ For medium temperatures above 90°C, the flow sensor must be equipped with an external supply.

⁴⁾ Only for horizontal installation.

⁵⁾ Extended minimum flow rate for dynamic range of 1:250. Available on request.

⁶⁾ Standard pulse values

Pressure loss graph

Measuring accuracy Class 2

Function

Power supply

The standard version contains a 3.0 VDC lithium battery (max. 90 °C) with a lifetime of 11 years (depends on configuration). It's also possible to use an external supply e.g. from a calculator.

Characteristic for ext. power supply:

- Power supply 3.0 ... 5.5 V DC;
- Power consumption < 130 mAh per year;
- Impulse current < 10 mA.

Pulse output

The flow sensor has two pulse output.

- Volume pulse output;
- Output for testing (high resolution pulse output for test laboratories, temporary limited) and for communication.

The output for testing is a combined impulse output. That means the flow sensor can emit a high resolution test impulse or the flow sensor can communicate via the same output.

By using an adapter the flow sensor can be read out via the IZAR@SET Software.

The electrical information for the volume pulses of the model for heating is described as follows: The pulse output is by default not galvanic. A galvanic pulse output is as an option available. The flow sensor has, by default, a 4-pin impulse cable with a length of 2.5 m. The maximal length is 10 m.

Specification of the pulse output:

	Battery supply		External supply
	No galvanic insulation (standard)	Galvanic insulation	No galvanic insulation
Volume impulse output	No galvanic insulation (standard)	Galvanic insulation	No galvanic insulation
Power Supply	3.0 V DC battery		3.0 – 5.5 V DC external supply
Contact load	UCE ≤ 30 V IC ≤ 20 mA with residual voltage of ≤ 0.5 V	UCE ≤ 30 V IC ≤ 1 mA with residual voltage of ≤ 0.5 V	UCE ≤ 30 V IC ≤ 20 mA with residual voltage of ≤ 0.5 V
Output frequency	≤ 20 Hz	*	≤ 150 Hz
Pulse description	Open Collector		
Pulse values	1 ml ... 5000 l (depends on qp)	*	1 ml ... 5000 l (depends on qp)
Pulse duration	1 ... 250 ms ± 10% pulse duration ≤ pulse pause	*	1 ... 250 ms ± 10% pulse duration ≤ pulse pause
Cable allocation			
White core	+ volume impulse		
Yellow core	test impulse / communication		
Blue core	GND		
Brown core	reserved	- volume impulse	+ power supply

* depends on the average flow during the lifetime of the flow sensor, on the pulse duration and on the pulse value.

Mounting

The flow sensor is installed either in the high temperature pipe or low temperature pipe as indicated on the data plate. The flow sensor has to be installed so that the direction of flow corresponds to the direction of the arrow on the flow sensor housing. Ensure that the flow sensor is always filled with liquid after installation. Calming sections before and after the flow sensor are not necessary. The flow sensor can be installed in both horizontal and vertical pipe sections, but always so, that air bubbles cannot collect in the flow sensor. We recommend installing the flow sensor in a tilted position (45°).

Make sure the flow sensor is installed sufficiently far away from possible sources of electromagnetic interference (switches, electric motors, fluorescent lamps, etc.). It is recommended that stop valves are fitted before and after the flow sensor to simplify dismantling. The flow sensor should be installed in a convenient position for service and operating personnel.

Wiring energy calculator type INFOCAL8

SONO 1500 CT	INFOCAL 8 terminal
Vcc (brown)*	9 (+)
Pulse (white)	10
GND (blue)	11 (-)

* Connect only if SONO 1500 CT with external supply
